HIGHLIGHTED PROJECTS

Mar 2024 — Now
Netherlands Client

Reconnect products

Technologies used: Typescript, ReactJS, Tailwind, Shadcn, Zustand, WebPush, Tanstack libraries, SignalR, Sipjs, PWA, ElectronJS

Description: Worked on changing an on-premise solution into a digital one for people with mental health challenges. This project involved creating a web app, desktop app, and mobile app to make sure the solution was easy to use on different platforms.

Contribution: Researched and chose the right technologies for the project, then created a proof of concept. Led a team of three frontend developers and planned the structure and technology used for the frontend. Set up guidelines and standards to keep the project organized and easy to maintain. Successfully delivered the project, which made the client happy and led to a new, bigger project.

Nov 2023 — Mar 2024

Korean Client

Dichoi solution – Booking platform

Technologies used: Typescript, ReactJS, Tailwind, Antd, Redux, Firebase

Description: Booking Management Dashboard designed to handle reservations, manage property availability, and coordinate schedules. Features include real-time chat for seamless communication and tools to manage people, properties, and bookings efficiently.

Contribution: Guided and supported junior developers in task completion, ensuring timely app delivery while maintaining high standards of quality. Consistently met project deadlines and contributed to client satisfaction through effective communication and problem-solving.

Mar 2023 — Present

Finnish Client

CRM and CPQ Application

Technologies used: Typescript, ReactJS, Tailwind, Server-sent Events, Web Workers, Zustand, Tanstack libraries

Description: In-house apps CRM (Customer-relation-management) and CPQ (Configure, price and quote) designed to manage customer relations, facilitate mechanical equipment specification calculations, and produce related PDF documents.

Contribution: Create a brand-new application utilizing a custom-built UI library, employing React, Tailwind, and incorporating suitable headless libraries when necessary. Develop and organize the source code entirely from the ground up.

Sep 2022 — Feb 2023

UK Client

Personal Finance Software

Technologies used: Typescript, ReactJS, MUI, Rechart, Firebase

Description: A web application that is the next generation of wealth management, and personal finance software, allowing online, real-time money management, and secure multi-banking in one place. End users can transfer money, download statements, view reports, search their history, use a net worth calculator, track investments, and more..

Contribution: Enhance the application and elevate the user experience, integrate with third-party services. Additionally, customize various charts to effectively present detailed reports.

Aug 2020 — Sep 2022

Ymese Product

Password Protect WordPress Pro

Technologies used: WordPress, Php, ReactJS

Description: A WordPress plugin to protect pages and posts by user roles or with multiple passwords; protect your entire website with a single password.

Contribution: Take on multiple roles and actively participate in various aspects of this project, including product analysis, testing, and coding. Lead the initiative to significantly increase the number of active users from 3,000 to 25,000+.
